Overview

Quick Details

Place of Origin: Guangdong, China
Model Number: DM542 / DM860 / TB6600
Models: DM542 / DM860 / TB6600
Protective function: over current / overvoltage / protection functions Pulse
Current: 1.2-7.0A
Control Mode: DSP vector closed loop control system
Warranty: 1 Year

Brand Name: Anford
Product name: Motor Driver
Matching Motors: Nema 17 / Nema 23 / Nema 34
Voltage range: 18V-80V VAC
Color: Black
Application: DIY Printers, CNC Routers.

Supply Ability

Supply Ability: 500 Piece/Pieces per Month

Packaging & Delivery

Port: Shenzhen, Shanghai, Dalian, Qingdao, as per your requirements.

Picture Example:

Lead Time (days):

Quantity(Pieces)	1 - 50	>50
Est. Time(days)	5	To be negotiated

[Motor Driver](#)

[Motor Driver](#)

Upgrade TB6600 and DM 542 Driver

Features:

1. High performance, low price
2. With 16 scales constant torque moment subdivision, the maximum resolution of 60000 steps / turn
3. The highest response frequency up to 200KPPS
4. When the stepping pulse stops more than 1.5S, the coil current is automatically reduced to half of the set current
5. Optical isolation signal input / output
6. Drive current 1.3A / phase to 7.0A / phase 16 files adjustable
7. Single power input, voltage range: AC110V-220V
8. phase memory function (Note: the drive stops for more than 3 seconds after the drive automatically memorizes the motor phase at the time,
9. Suit for 57/86/110 type of various brands of stepper motors.

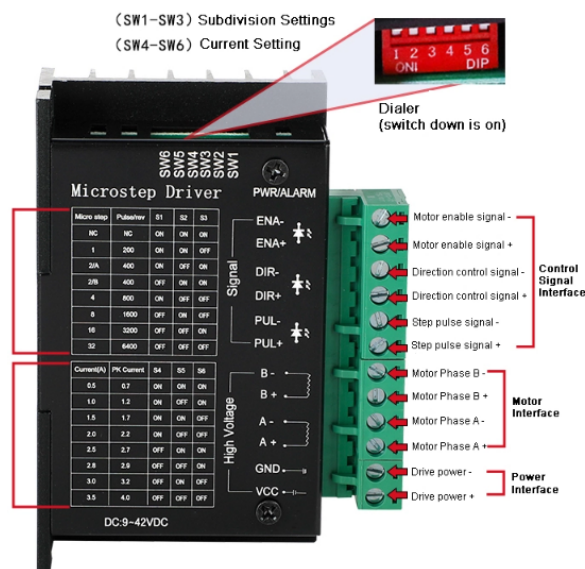

Drivers	Adaptation	Input voltage	Peak current	subdivision
DM542	Nema 17 / Nema 23	20-50 V	4.2 A	128
DM860H	Nema 34	24-110 V	7.2 A	256
TB6600	Nema 17 / Nema 23	9-42V	4 A	32

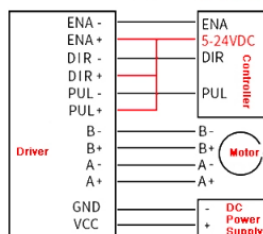

Wiring Diagram:

TB6600

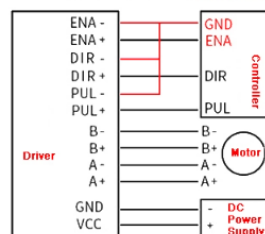

Pulse signal: 3.3V / 5V / 24V
 Input voltage: DC 9V - 24V
 Subdivision: 32
 Adaptation: Nema 17 / Nema 23

Common Anode Connection (Active low)

Common Cathode Connection (Active High)

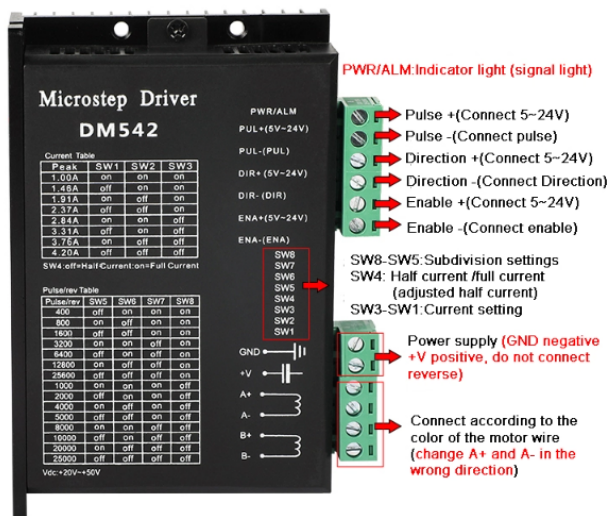

DM542

SW1-SW3: Operating current setting switch SW4: Standby current setting switch SW5-SW8: Subdivision setting switch

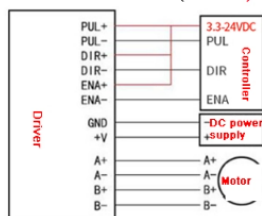

Input voltage: DC 20V - 50V
 Subdivision: 400-25600
 Adaptation: Nema 17 / Nema 23

Dc 3 Axis Module H Bridge Three Phase Steper Controller Kit Board 750w L298n L293d Cnc Serve Step Bldc Stepper Motor Driver - Buy Manufacturer High Servo Brushless Dc Cnc Router Ac Bldc 48v Dm542 Closed Loop Tb6560 Stepper Motor Driver,20a 400w Mount Servo Brashless 2 Phase Nema 23 Dm3722m Nema 42 High Stepper Motor Driver For Robot,542 24 Nema 57mm Paso A Paso Nema 23 Stepper Motor Driver With Speed Control Product on Alibaba.com

Common Anode Connection (Active low)

Common Cathode Connection (Active low)

DM 860 & DM 860H

Pulse signal: 3.3V / 5V / 24V

Input voltage: DC 9V - 24V, AC 18V - 60 V

Subdivision: 400 - 25600

Adaptation: Nema 34

DM860H

With Heatsink

Voltage: AC 18V-80V
DC 24V-110V

DM860

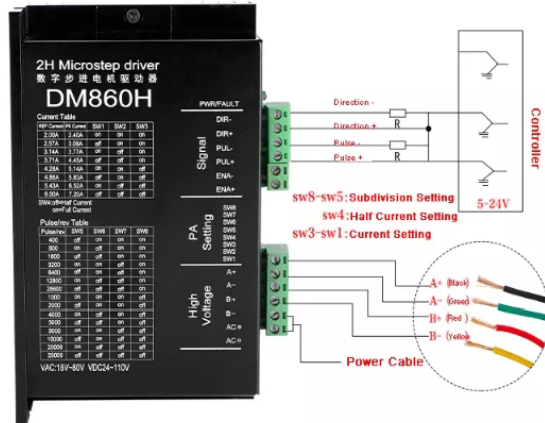

Without Heatsink

Voltage: AC 18V-80V
DC 24V-80V

SW4=OFF Half Current Mode

SW4=ON Full Current Mode

Nema 23 Stepper Motor Or Motor Kits
Sale Prices: 5-12 usd/pc

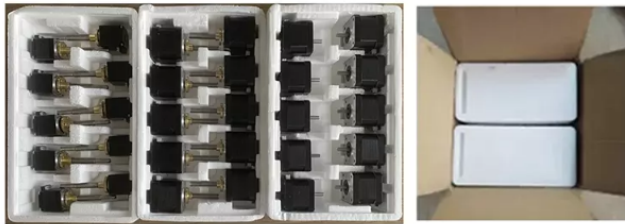

Stepper Motor Drivers
Sale Prices: 4-30 usd/pc

- 1. Any inquiries will be answered within 24hours,**
- 2. Professional motor supplier, professional technical solutions.**
- 3. OEM available:**
 - 1)Customized Logo or Package.
 - 2)Any idea of yours on Motors , we can manage to fulfill and put it into production.
- 5. After-sale service:**
 - 1) All products will go through strict quality check in our factory before packing, we have experienced QC team who is in charge of quality checking before shipping.
 - 2) All products will be well packed before shipping.
 - 3) All our products have a 1-year warranty, and we are sure our products will be free from maintenance within the warranty period in general.
- 6. Quantity under 50 sets we have in stock, 51-200 sets lead time will be 7 days.**

Company Information

Jingbang Technology company is located at Chengdu Sichuan, the business includes CNC machining and stepper motor production, with standard workshop, employing about 300 people, is a high-tech enterprise focusing on the research, development, design, manufacture. It mainly produces various kinds of cnc machining parts and hybrid stepping motor, permanent magnet stepping motor, DC brushless motor, brush direct current (with encoder) motor, servo motor and other products. Widely used in finance, communications, medical equipment, printers, intelligent stage lighting, 3D printing, engraving machine, textile machinery, UAV and robots and many other fields. With its excellent adaptability and stability, " products are showing their first-class professional standards in various high-end applications, and increasingly become excellent suppliers for customers to choose from.

FAQ

1, The alarm indicator light is off.

Possible problems: the motor is connected to the wrong line / the voltage is too high or too small.

Solution: check and connect the wire / check the power supply.

2. The motor does not rotate, And can not maintain the torque

Possible problems: motor wiring is not correct / off-line use of the reset signal effective

Solution: correct motor wiring / enable Reset invalid

3. The motor does not rotate, and the torque may be maintained:

Possible problems: no pulse signal input / subdivision is too small / current setting is too small / drive to be protected

Solution: adjust pulse width and signal level / correct selection of subdivision / correct selection of current to power on again after power failure

4. Motor rotation direction error:

Possible problems: wrong power line phase sequence connection / motor line short circuit / wrong direction signal input

Solution: exchange any two-phase wiring (such as a, a-exchange) / recheck and connect correctly / change direction setting

5. Motor torque is too small:

Possible problems: phase current setting is too small / acceleration is too fast / motor stalling / driver and motor do not match

Solution: correctly set current to reduce acceleration value / remove mechanical fault / replace appropriate driver.

6. Inaccurate position:

Possible problems: signal received interference / subdivision is not correct / current is too small / motor wire connection is poor
Solution: eliminate interference / set subdivision correctly / increase current / check and connect
